

About the Course

Business continuity is an association's ability to ensure operations and core business functions are not seriously affected by a disaster or unplanned incident that take basic frameworks disconnected. Business continuity planning is the way toward making systems of prevention and recovery to deal with potential threats to a company. In addition to prevention, the objective is to empower progressing tasks before and during execution of disaster recovery. In this course you learn how to implement the plans you created in the design stage. In the implementation stage, you will also understand how to develop a response structure – as well as priorities, procedures, responsibilities, and resources - for dealing with incidents.

Learning Objectives

Understanding the Key Concepts of Business Continuity

1

Understanding the Key Concepts of Disaster Recovery

2

Identifying the Main Requirements of ISO 22301

3

6

How to Design a Backup Site

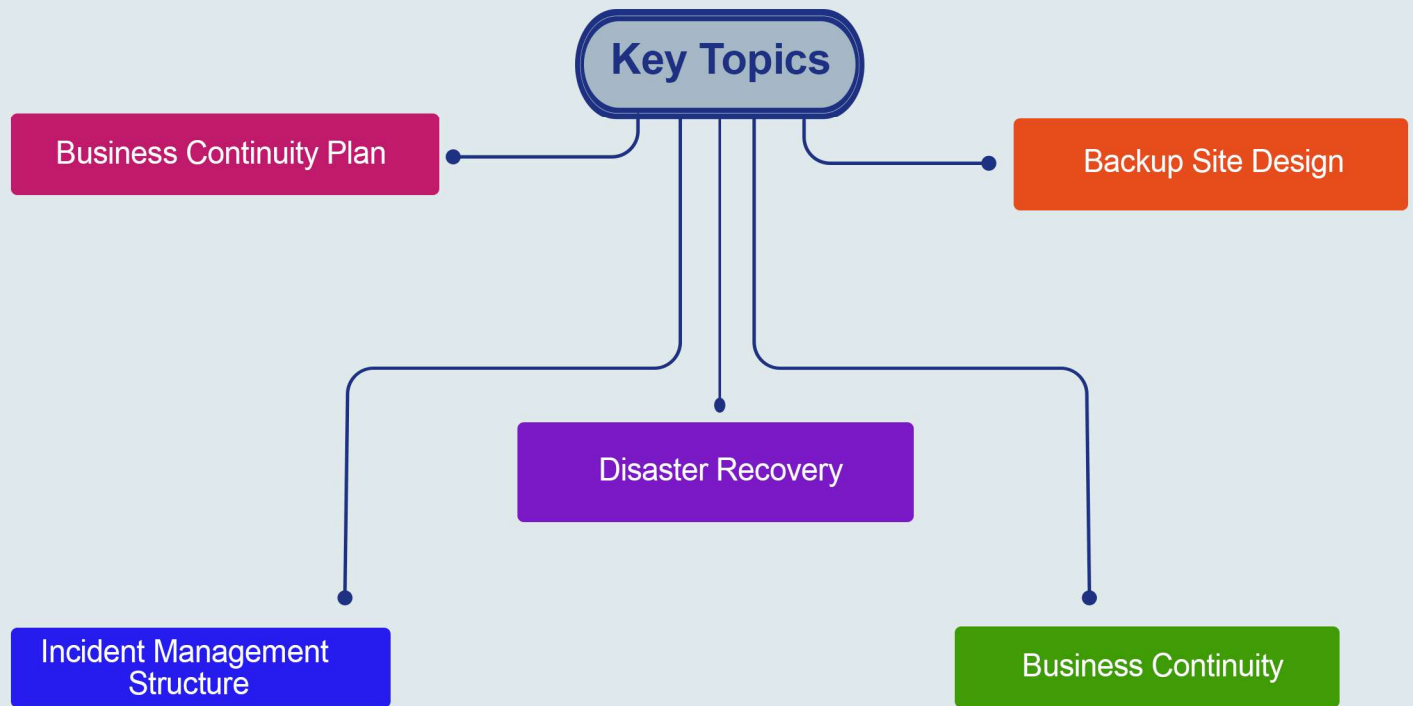

5

Identifying Critical Business Functions and Potential Disruptions

4

Identifying the Main Requirements of ISO 27031

Key Topics

Pre Requisites

- Information Security Incident Management Course

What You Will Receive

Course Presentation File

Complementary Files

Business Continuity
Management Principles
eBook

Who Should Attend

- Executives
- CISOs
- Information Security Specialists
- Incident Responders
- Security Policy Officers
